

API paths

POST /api/register

to register a device which has not been registered yet ### Body
No Body ### Successful Response (200) returns a secure cookie
encoding the user identity

POST /api/append_history/<history item>

appends the `history item` to `HISTORY.log` dedicated to the user
Body No Body ### Successful Response (200) No response

GET /api/get_history/<start line>/<end line>

gets the history, the `start` and `end` index follow the same logic as
substrings/slicing, i.e. the range of lines which the api returns is
[start line, end line), where line numbers start from 0 so to get the
first 30 lines, one would query `/api/get_history/0/30` ### Body
No Body ### Successful Response (200)

```
{  
  "src" : [  
    ... CONTAINS an array of all the lines written in history  
  ]  
}
```
